SUMMARY

Backend Developer specializing in Python 3, FastAPI, PostgreSQL, and Docker containerization. Dual degree student in Computer Science (Universidade Anhembi Morumbi) and Systems Analysis and Development (SENAI SP) with a prior Technical Degree in Systems Development from SENAI. Experienced in building scalable RESTful APIs, implementing Clean Architecture principles, automated migrations with Alembic, and test suites with Pytest.

EDUCATION

Universidade Anhembi Morumbi

Bachelor of Science in Computer Science

Feb. 2026 – Dec. 2029

São Paulo, Brazil

SENAI São Paulo

Associate Degree in Systems Analysis and Development

Jan. 2026 – Dec. 2027

São Paulo, Brazil

SENAI São Paulo

Technical Degree in Systems Development

Feb. 2024 – Dec. 2025

São Paulo, Brazil

RELEVANT COURSEWORK

- Data Structures
- Algorithms Analysis
- Clean Architecture
- Object-Oriented Prog.
- Software Engineering
- Relational Databases
- RESTful API Design
- Computer Architecture

PROJECTS

ScopeMaster | *Python 3, React 18, TypeScript, Supabase RLS, PostgreSQL, TailwindCSS*

2025

- Spearheaded technical development for SENAI Capstone Project, managing a collaborative software requirements platform.
- Engineered relational PostgreSQL schemas and implemented fine-grained Supabase Row Level Security (RLS) policies.
- Integrated reactive user interfaces built with React 18 and TypeScript with Python backend services.
- Applied agile software development methodologies (Scrum) and orchestrated collaborative Git version control workflows.

Interactive Portfolio | *TypeScript, React, Next.js, Vercel*

2026

- Developed interactive developer showcase portfolio highlighting backend architecture, tech stack, and GitHub repositories.
- Configured automated continuous deployment pipeline connected to GitHub via Vercel platform.

Vyzor | *Python 3, FastAPI, PostgreSQL, SQLAlchemy 2.0, Alembic, Docker, Pytest, Redis*

2025 – 2026

- Architected and developed RESTful backend engine for a multi-tenant SaaS application utilizing Python 3 and FastAPI.
- Implemented relational database ORM layer with SQLAlchemy 2.0 and automated database migration workflows via Alembic.
- Secured endpoints using OAuth2 JWT authentication, RBAC authorization, and high-performance in-memory caching with Redis.
- Containerized full development and production services using Docker Compose, ensuring environment consistency.
- Engineered comprehensive automated unit and integration test suite using Pytest to validate business logic.

TECHNICAL SKILLS

Languages: Python 3, SQL, TypeScript, JavaScript, HTML5/CSS3

Frameworks & Libraries: FastAPI, SQLAlchemy 2.0, Pydantic, Pytest, React 18, TailwindCSS

Databases & Caching: PostgreSQL, Redis, SQLite, Supabase RLS

Tools & Infrastructure: Docker, Docker Compose, Alembic, Git, GitHub Actions, Linux, VS Code

Methodologies & Architecture: RESTful APIs, Clean Architecture, SOLID Principles, JWT Auth, Scrum

Languages (Human): Portuguese (Native), English (Level B1 – Intermediate)
